PROJECTS

Social Media Sentiment Analysis System

Python, Flask, SQLite, VADER, REST APIs,

ReportLab

- Built a full-stack web application that collects brand mentions from News API and Reddit API and classifies them as Positive, Negative, or Neutral using VADER.
- Developed REST APIs with Flask to collect, process, and analyze social media and news data, with SQLite for persistent data storage.
- Implemented role-based access control for three user roles with protected routes, session management, and role-specific dashboards.
- Applied Object-Oriented Programming principles and generated automated PDF reports with charts using ReportLab for structured sentiment analysis results.
